SKILLS

As a seasoned web developer with six years of front-end experience, I pride myself on staying abreast of the latest technologies for creating cutting-edge websites and web applications. My commitment to delivering pixel-perfect and fully responsive layouts ensures a seamless user experience across all devices.

My drive for continuous learning leads me to explore new technologies, and tools, and expand my knowledge daily. I am particularly passionate about specializing in JavaScript and its diverse frameworks.

Skills:

- HTML
- CSS
- SASS (SCSS)
- NPM, WebPack, Gulp
- JavaScript
- TypeScript
- React.js
- Custom WordPress
- Custom Post Type
- Gutenberg Blocks
- Woocommerce
- Version control system (Git)
- Basic knowledge of Bash shell terminal
- Vagrant virtualization
- Docker (Beginner level)
- Email Templating
- Collaboration software ClickUp, Trello, Asana, Notion, etc.
- Basic understanding of design tools like Figma, Zeplin, Sketch
- Accustomed to working with template engines (Blade, Smart, Twig)

WORK EXPERIENCE

- Build reusable code and libraries for future use, optimization, and scalability
- Ensure the technical feasibility of UI designs
- Translate technical requirements and mockups into fully functioning websites using HTML/CSS/JS
- Deliver maintainable and scalable code
- Assist with the development of new client websites

UpWork - Front-End Developer

04 2019 - Present

Profile link:
https://www.upwork.com/o/profiles/users/~019adf1d4f2be03451/

- An average score of 4.96.
- Experience with deciding the cost of the project and the time I need to finish it.
- Finding contacts for working on projects remotely and having an independent income.

- Communicating with people from all around the world and finding projects to work on.

Private projects with a team of freelancers (Designer and Back-End Developer)

01.2020 - Present

Advivus LTD (Front End Developer)

04.2023 - Present

Advivus is the affiliate network dedicated to making Software as a Service (SaaS) and digital-based products sell. I'm responsible for developing and maintaining landing pages for affiliate marketing vendors.

Huemor LLC (Front End Developer)

02.2024 - Present

- Create custom, editable modules for use in page templates
- Translate static designs into interactive front-end experiences
- Build reusable code and libraries for future use, optimization, and scalability
- Ensure the technical feasibility of UI designs
- Translate technical requirements and mockups into fully functioning websites using HTML/CSS/JS
- Deliver maintainable and scalable code
- Assist with the development of new client websites

My selected work:

https://gallopbranding.com/

Gallop Branding, a top-tier design agency, features a website that embodies pixel-perfect design and an elaborate user interface. Developed using plain HTML, SCSS, and JavaScript, the site highlights the intricated design elements.

Throughout the entire project, I collaborated closely with a single talented designer. The website spans roughly 30 pages, and with the use of SCSS, it remains easily maintainable and expandable. Furthermore, its exceptional responsiveness accommodates an array of screen sizes, ranging from compact smartphones to large 4k and 8k displays, including ultra-wide monitors.

https://advivus.com/

Welcome to the Advivus website, a digital embodiment of our mission to revolutionize SaaS and digital product marketing through our expert affiliate network. Crafted with WordPress and enhanced with SCSS for a sleek, responsive design, our site offers a streamlined user experience. It showcases our commitment to delivering measurable results and exceeding digital marketing expectations. Explore our innovative approach and join us in shaping the future of affiliate marketing.

https://enchanting-malasada-7379dd.netlify.app/ (Still in production)

RabbitX represents a global, permissionless perpetual exchange, meticulously constructed on the Starknet platform. The landing page, designed for presentation purposes, employs HTML, SCSS, and JavaScript, with Lottie files utilized for captivating scroll animations. As the project progresses, the plan is to transition the website to React for further development. At present, the website's development has been temporarily placed on hold.
